

Agentic AI Basics

A very short, step-by-step introduction

What is Agentic AI?

Agentic AI is an AI system that can understand a goal, create a plan, use tools, take actions and check whether the goal is completed.

How It Works

1	Receive a Goal The user gives the AI a task or desired result.
2	Create a Plan The AI divides the goal into smaller tasks.
3	Use Tools It may search the web, call an API, access a database or run code.
4	Take Action It performs the tasks according to the plan.
5	Check the Result It verifies whether the expected result was achieved.
6	Improve and Retry If something fails, it changes the plan and tries again.

Simple Flow

GOAL	PLAN	TOOLS	ACTION	CHECK	RESULT
Example	Goal: Plan a 3-day Hyderabad trip. The agent searches for places, checks travel time, selects suitable attractions, prepares a daily schedule and presents the final plan.				

Generative AI vs Agentic AI

Generative AI	Agentic AI
Creates content such as text, images or code.	Plans, decides, uses tools and takes actions to achieve a goal.

Remember

Agentic AI = Goal + Planning + Tools + Actions + Checking + Improvement
